Study after study\textsuperscript{1,2} confirms what many of us can see everyday, America is losing ground in producing the science and technology professionals our nation needs to stay competitive in today’s global economy. As the recent Gulf oil spill underscores, the need to understand and protect our nation’s precious natural resources will require the best trained minds our nation can produce, now and in the future.

“My Sea Grant[experience] encouraged me to be interested in performing cutting edge, innovative research.”

— survey respondent

No one is more committed or successful in meeting these needs than our nation’s Sea Grant College Programs. Sea Grant combines the innovation and technology of our premier coastal and Great Lakes universities with practical experience in marine policy. This “on-the-job” training is critical for the success of our new graduates.\textsuperscript{3}

“[Sea Grant provided] on the job training in the field I wanted to pursue.”

— survey respondent

“Sea Grant funded my Master’s thesis in 1974, and as I learned of ocean and marine science issues, I changed my career path... to marine resource management. I completely and totally owe my career to Sea Grant.”

— survey respondent

The survey was developed and conducted by the Sea Grant Association, a national non-profit organization dedicated to promoting Sea Grant concepts, with collaboration from the NOAA Office of Oceanic and Atmospheric Research and the National Sea Grant College Program. UNIHI-SEAGRANT-LL-10-02

“[Sea Grant] introduced me to the nexus of science and politics that has kept me interested in working in the marine policy area for 25 years.”

— survey respondent

A new survey confirms Sea Grant programs are the training grounds for many who go on to serve our nation as government and academic scientists.

Over 1500 employees of NOAA, the agency tasked with the management and stewardship of our nation’s coastal and marine resources, responded to a survey asking about their training and education. Sea Grant is NOAA’s primary university-based program in support of coastal resource use and conservation through competitive research, community-based extension, and innovative educational activities.

The NOAA National Sea Grant College Program is committed to environmental stewardship, long-term economic development and responsible use of America’s coastal, ocean and Great Lakes resources. Sea Grant’s research, extension and education programs focus on sustainable coastal development, hazard resilient coastal communities, and a safe and sustainable seafood supply, all within healthy and productive ecosystems.
